

Priya Patwa

B.Tech - Biomedical Engineering
Honours in Medical Imaging Tech.
Vidyalankar Institute of Technology, Mumbai

+91-7045407980

patwasppriya19@gmail.com

Education

Program	Institution	%/CGPA	Year of completion
B-Tech	Vidyalankar Institute of Technology, Mumbai	9.88	2026
XII	Guru Nanak Khalsa College of Science, Mumbai	71.08%	2019
X	Sadhna Vidyalaya High school, Mumbai	85.60%	2017

Skills

- **Programming** : Python, Java, Matlab, ImageJ, AutoCAD.
- **Biomedical Engineering** : Biomedical Signal Processing, Medical Image Processing, Biosensors, Clinical Engineering.
- **Medical Device Industry** : Verification & Validation (V&V), FDA Regulations, EU MDR.
- **Electronics & Instrumentation** : Sensors & Instrumentation, Biomedical Instrumentation, Arduino, Embedded Systems.
- **Operating system** : Windows, Linux

Experience

VISION RESCUE, THE MOVEMENT INDIA (internship)

- Assisted in community health check-up drives, promoted child vaccination awareness, and managed health data analysis using Microsoft Excel. *Sep 2023 - Dec 2023*

FORTIS HOSPITAL(internship)

- Gained exposure to advanced medical equipment, hospital technologies, and biomedical engineering workflows through clinical observations and technical training sessions. *Dec 2023 - May 2024*

RESEARCH INTERN IIT MADRAS

June 2025 - July 2025

- Synthesized and surface-modified nanoparticles for drug delivery applications, performed DLS and zeta potential characterization, and analyzed experimental data using OriginPro to study nanoparticle-cell interactions.

Positions of Responsibility

- **Real Time Temperature Monitor**
Developed a mini-project using Arduino-Uno and LM35 temperature sensors and also studied various temperature sensors and their characteristics.
- **Mini Diagnosis, Prototype Chatbot**
Using Python, we developed a mini chatbot that would diagnose a disease on the basis of classified symptoms and also recommend it to the medical practitioner.
- **Prostate Cancer Risk Assessment using Deep Learning and MRI Imaging**
Developed a deep learning-based diagnostic system for prostate cancer detection from MRI images, incorporating Gleason score assessment to support accurate classification and disease severity evaluation.

Relevant coursework

- Biomedical Nanotechnology
- Image Processing
- Matlab Simulink
- Digital logic circuit
- Linear Integrated circuits
- Robotics

Publications

- **Book Chapter in Springer**
Current and future trends in healthcare quality control and improvement
Mentor - Dr Gajanan Nagare (HoD in BM, VIT Mumbai) *2024*
